

Retention and Motivation Initiative A Raytheon Australia Helicopter Solution for the ADF's Next Generation Aviators

Raytheon Australia's Retention and Motivation Initiative (RMI) solution provides the Royal Australian Navy (RAN) with a turn key capability of three 'systems rich' Agusta A109 Power helicopters.

Benefits

- A performance based 'turn key' solution.
- 1500 flying hours per year.
- Twin engine platform.
- Single Pilot IFR.

Capabilities

The Raytheon Australia RMI program provides the RAN with fully supported, safe, reliable and flexible helicopter platforms that provide appropriate flying capability relevant to the customer's requirements.

This capability will assist the transition of recently graduated aircrew from the basic training platforms to the Navy's operational types.

A modern, capable, light, twin engine and 'systems rich' platform such as the Agusta A109 Power is extremely cost effective for the retention of aircrew operational skills.

RMI AIRCRAFT SPECIFICATIONS: A109 POWER

Engines:	2x Arrius 2K1 Full FADEC
Avionics System:	Weather Radar EFIS, 3 Axis Duplex AFCS, NPA/RNAV Capable GPS, CVR, UHF/VHF/HF Comms
Role Equipment:	Rescue Hoist, Lifting Hook, Flotation Equipment

Through RMI, Raytheon Australia maintains the platforms on the State Register while Navy conducts flying skill retention operations consistent with Navy standards and curriculum.

An Innovative Solution

Raytheon Australia's RMI concept has been built to ensure that the total solution provides Navy with the capability, capacity and relevance to meet the customer's immediate needs.

The Navy's 'Power Flight' operates from the Naval Air Station at HMAS Albatross, Nowra, NSW supported from Raytheon's expanded airside facilities at the Nowra Technology Park.

The RMI solution has reduced the training load on Navy's operational platforms and assisted aircrew with the means to 'train like they fight.'
